Farm Toxicology for Primary Care

Recognition and Management of Pesticide Poisonings

Solidify your knowledge of recognition and management of pesticide poisonings in primary care. Learn to problem-solve with your patients who have been exposed - occupational and environmental history, critical information sources, differential diagnosis techniques, evaluation, and treatment of acute and chronic pesticide poisonings.

Each module is approximately 30 minutes in length.

- Introduction to Farm Toxicology
- Critical Information Sources
- Insecticides: Cholinergic Agents and Organochlorines
- Insecticides: Pyrethroids, Nicotine and Neonicotinoids
- Herbicides
- Rodenticides and Fungicides
- Poisonous Gases
- Long Term Consequences of Pesticide Exposures in Farmworkers

Specifically designed for physicians, physician assistants, nurse practitioners, and nurses in primary care.

This project is supported with funds from the North Carolina Pesticide Environmental Trust Fund and Pesticide Educational Resource Collaborative - Medical (PERC-med).
